Bachelor's/Master's Initial/Final / Seminar Talk

PURPOSE/EVENT, January 1st 2025
Aachen

- **When giving a presentation at COMSYS, you do not need an agenda slide; your presentation should flow naturally and feature reasonable transitions**
 - Only for talks >45 min you can consider adding such a slide
 - If in doubt, talk to you advisor

- **Use only plain, un-animated slide transitions.**
- **Do not use special animation effects**
 - Things should pop up “hard”
 - Things should not fly around, glitter, sparkle, beep, blink, etc.
 - (Dis-)Appear effects are fine to support the flow of the presentation.
- **Don't overload your slides with text.**
- **Use graphs and figures.**
- **Don't leave slides half empty – balance the content.**
 - Use paragraph spacing settings if necessary and appropriate. Don't simply hit enter multiple times.
- **Try to get a consistent look. Re-use colors, shapes, etc.**

This is a takeaway

With a subtitle

?

Is this a test question?

Everything is bad

We need to warn

Everything is good

Because we know how to do it
(we're very good)

- A picture can be inserted which is right aligned
 - It is vertically aligned with the position it was inserted in the source
- There are two variants
 - A variant based on `\includegraphics` which takes the same arguments as `\includegraphics`
 - An environment for any content

Emphasize Something on the Side

- You can use icons from iconmonstr.com
- The `fontawesome` package also has icons

Using certificates is always a good idea.

Ever thought about using them in the cloud?
You really should.

But you should not use them on too many computers.
Even not when...

...we want to use a subbox!
This is really important!

Your talk should feature a dedicated conclusion slide that wraps up the presentation.

- Avoid having a final slide with just your contact information on
- Instead add a box “Thank you for your attention” to signal the end of your talk (as shown here) while staying on the conclusion slide with all your awesome findings and takeaways

Your talk should feature a dedicated conclusion slide that wraps up the presentation.

- Avoid having a final slide with just your contact information on
- Instead add a box “Thank you for your attention” to signal the end of your talk (as shown here) while staying on the conclusion slide with all your awesome findings and takeaways

Thank you for your attention!

- You can reserve some space for where your video will appear
 - Use `\activatevideospacing` before the title slide
- You can (optionally) insert a placeholder of yourself

This block does not overlap your video.
